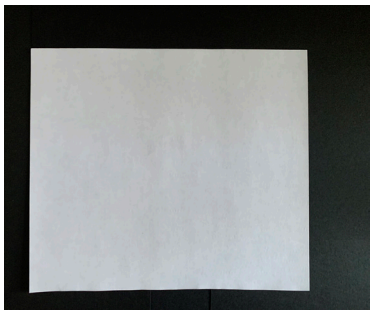
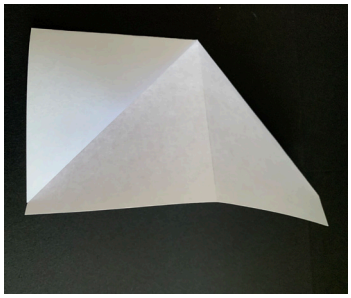
KING PROTEA INSTRUCTIONS

How to create a King Protea out of one piece of A4 paper. Using Coloured paper makes the result more vibrant.

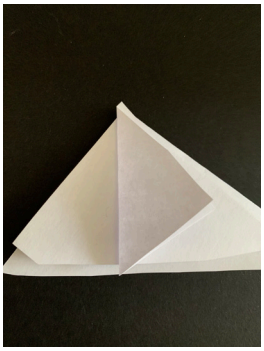


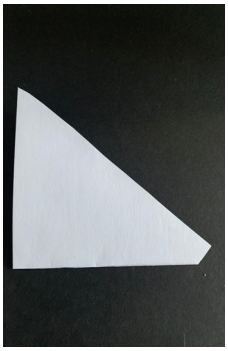
Firstly, you want a square piece of paper, you can either cut it or fold 1/3 of the page into a square. Preferably cut.

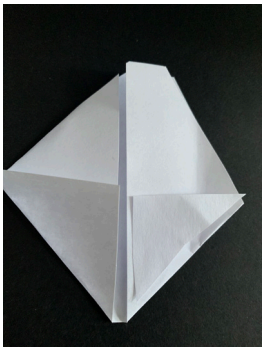
Secondly, you will fold equally four times until the shape of a square. unfold it into a rectangle and fold into a trinalge by putting pressure on the inside of the fold.



you will want to fold into this triangluar shape and see a pyramid shape repeat once more to fold onto itself.

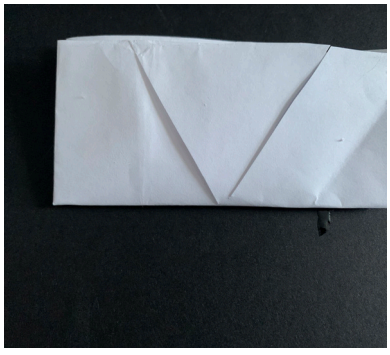






open up the square segment on the left and fold into another triangle. unfold the triangle back into the pyramid shape and begin folding the bottom two edges to the top of the paper into a diamond.

Take each triangle and open so it looks like a pocket and then fold down each into a square. repeat on the other side.



Fold the top down like closing an envelope. (Toughest step: Re-read if neccessary) Rotate to the middle so the middle of a sandwich is pointing to the sky and begin to fold and apply pressure so everthing folds outwards.

Finally, you will unfold all four corners and then fold half the paper back into place as these would be the petals of the King Protea.
